

BAILEY

ELECTRICAL SERVICES

Impeccable installations delivered on time within budget

Who Are We

Our History

Bailey Electrical is a proud Peterborough based electrical company, formally trading with solely the business owner in 1996.

The business takes a customer-focused commitment, with our team providing excellence in business management, organisation and efficiency. We strive to go above, and beyond the standard level of service you would expect, all while achieving our business growth goals. We carry out the majority of our work within a 150-mile radius of Peterborough; however, we provide our services nationally for clients who would benefit from us. Located in the centre of the UK, we station effectively to be able to serve regional depots up and down the country.

Bailey Electrical has been trading for many years; this shines through in our project deliverance. Here we exist to provide our customers with the utmost professional courtesy, ensuring excellent customer satisfaction throughout all interactions.

Whether we working with a small or large business, we are guided by our rules of business values that all staff adhere to. We commit ourselves to be the area's preferable electrical contractor of choice, growing our business by our devotion to meeting the needs of every customer as an individual.

We exist to provide honesty and credibility to every customer, no matter the size of project. Bailey Electrical stands on the foundation of dependability, building strong, loyal customer relationships year on year.

Open & Honest Pricing

Bailey Electrical know that it's better to budget for every possible cost and not need it, rather than need it but not have it. There is nothing more frustrating than when something is overlooked in the preparation of what should have been included.

Accreditations

Our accreditations assuring you of our commitment of top quality, reliability and dependability

Our Methodology

At Bailey Electrical services we are passionate about what we do and welcome the opportunity to discuss how we can help you or your company build or improve the building assets.

We carry out projects from the value of £5,000 up to £250,000

Purpose

To be the best electrical contractor.

Vision

To deliver customer satisfaction to the highest standards of quality and to be the preferable electrical contractor of choice.

Mission

Strive to deliver all projects on time, to budget, to performance specification, safety and keeping our environment clean.

Purpose

We are serving Peterborough and the surrounding areas up to 150miles as the crow flies however, we will be looking to take on special premium projects further afield and national contracts up and down the UK.

The sectors we operate in are:

- Offices
- Warehouses
- Industrial
- Schools
- Leisure Complexes
- Retail Stores
- Doctors Surgery's
- Nursing Homes

Types of work we carry out are:

- Electrical
- Fire Alarms
- CCTV Systems
- Access Control
- Data Networks
- Solar Energy
- Solar Storage
- Vehicle Charging Outlets

Project Management

Project management is getting the building built on time, to budget, to the performance specification safely. It consists of controlling the four components below:

- Time
- Money
- Specification
- Safety

Project management is about quality communication and controlling the four elements. We have tools to do this as we will describe below.

Time—The project time line

We work out the time schedule from the budget. We convert monetary values to time values and prepare a program schedule and a time line. This is in the form of a bar chart. The chart describes the elements of the work over a period of time. Our project manager has control of this program chart and will share it with you at regular progress meetings.

Safety in Numbers

Our approach to safety centres on training, instilling and reinforcing safe behaviours throughout the company and entire project team, including owners, architects and sub-contractors.

We provide the tools and information people need to make informed decisions through detailed root-cause analysis and pre-task planning.

The output is a robust, value-based safety program that looks ahead at leading indicators to produce exceptional results:

Health & Safety is priority for the company. Our safety management system has been developed to meet the requirements of HSG65 Occupational Health & Safety Management Systems. We are also SafeContractor registered which proves the standards we have achieved.

Social Responsibility

Sustainability

Our purpose is to help our consumers in the Commercial and Industrial sectors to reduce their dependence on grid-supplied electrical energy by maximising the available generation of free solar energy.

With the installation of an effective Photovoltaic system, businesses reduce their CO2 emissions by replacing the use of unclean grid power systems.

The Sustainable Advantage

Being “Green” is no longer novel. Building sustainable structures is simply the right thing to do. Right for the environment and right for business.

Sustainable building projects routinely produce greater marketability, higher employee productivity and improved building efficiencies.

To assist owners in the developing and implementing the best strategies, our combines experience people, a collaborative methodology and custom tools to help customers address the triple bottom line: environmental, social and economic.

Our Core Competitive Edge

We are a multi system installer that can, design, install and maintain every type of electrical system for our customers projects

Whether your projects needs are electrical, fire, automation & controls, renewable energy's or security we have the people and solution to be your one stop shop capable of completing your entire projects electrical needs.

- 10million Employers Liability Insurance
- £250,000.00 Professional Indemnity Insurance
- Contract Insurance can be provided

What about after!

We are not a fit and forget business. We want to ensure the installation that we completed many months ago remains in tip top condition.

11 months after its completion we shall without cost to you revisit the site and carry out a brief health check correcting all items found that are not up to spec replacing any accessory's or switch-gear that look as though they are failing or have failed replacing them under the manufacturers guarantee.

Service

We check all critical switchgear by using infra-red imagery hot spots caused by loose connections or failing switch-gear will show up white as in the image opposite. These areas are likely to cause future problems shortening the lifespan of the installation.

A true reduction in breakdowns if any at all.

We provide your systems the tender loving care needed to keep your installation in a productively harmonious state and breakdown free.

After completion of your installation and its 11month health check we are in an excellent position to take on the installation under a maintenance contract with the purpose of keeping your installation in working order for many years with as little maintenance cost as possible.

We do this by listing all the electrical assets within your installation, highlighting critical parts that if were to fail would cause high levels of disruption to your normal service and comparing FLIR images as above as the installation ages.

We then stock identified critical parts that cannot be sourced immediately so that we are able to provide speedy maintenance service 24 hours a day 365 days of the year.

Please call if you wish to discuss this service.
